

Dear Sirs,

Compiling information from many sources, I have to state that I'm against Docket 03-104. Interference will be caused in the HF frequency spectrum. There are many services utilizing this range. Shortwave broadcasting, Amateur Radio, Utility HF Radio and State Emergency Management organizations. Present atmospheric conditions effect communications throughout the year! "BPL" will add to the problem. HF communications, will always be the "Backbone" system for emergency long distance needs. Proven over and over.

Thank you,

Robert Tiller
